CLIMwell

The concept which makes intelligent use of the building's calories for ideal ventilation

- Control of the energy of the building and of its energy consumption have become fundamental to the profitability of livestock farming.

Tuffigo Rapidex has developed a new concept of ventilation in order to help farmers meet this challenge.

Based on its know-how and its ventilation technique, Tuffigo Rapidex presents the CLIMwell system. The number of CLIMwell per building is tied to proper ventilation distribution.

The CLIMwell system allows you to solve your ventilation problems. This system fits directly over the fan's air inlets.

in this way, the flow of incoming air is not disturbed.

Enjoy multiple benefits :

- Full access to cartridges, very ergonomic, the time saved allows you to assure good working order.
- Fast installation, no specific fitting out of the building is necessary (stone floor, mounts, ...)
- Fan specifically adapted to the task = significant decrease in electricity consumption.
- The CLIMwell system guarantees efficient ventilation and conformity with best farming practices.

Climate controlled environment

Integrated into the ventilation system

Easy cleaning and decontamination

Significant decrease in electricity consumption

Improved CO2 levels

Super-silent

Controlled by AVItouch or AVIbox

CLIMwell

Change for new era of ventilation with CLIMwell!

Tuffigo Rapidex changes the process of ventilation..

This is a necessary change in order to obtain excellent results with respect to the building's environment and in order to keep the litter dry throughout the building.

CLIMwell makes it easier to comply with health and safety standards by decreasing levels of CO₂.

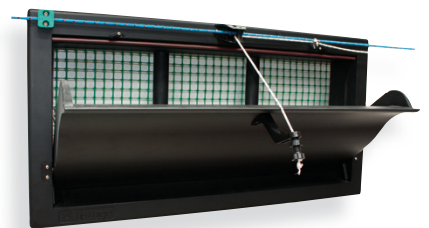

With CLIMwell, cleaning and decontamination is quick and complete. Quick access to elements.

The CLIMwell system is managed by our AVItouch or AVIbox computers. They allow you to control all the environmental parameters of the building and verify the proper functioning of the ventilation.
