

Powerful alkaline foam cleaner for cleaning barns

IntraPower Foam

- Effectively dissolves all types of grease and dirt
- Perfect preparation for good disinfection
- Strong adhesion to walls
- Reduces number of pathogenic bacteria
- Prevents spread of diseases

Intracare

Powerful alkaline foam cleaner for cleaning barns

IntraPower Foam

Intra Power Foam is part of Intracare's overall disinfection programme (Intra-Clean). This overall programme allows cattle farmers to work according to the latest requirements and regulations for optimal food safety and hygiene.

The Intra-Clean programme offers three products:

- Intra Power Foam (foam cleaner)
- Intra Multi-des (disinfectant)
- Intra Hydrocare (cleaning and disinfection of drinking systems).

Intra Power Foam is a highly alkaline foam cleaner ideal for more demanding cleaning, but also perfectly suitable for periodic cleaning of barns. Intra Power Foam has a strong adhesive power which guarantees a long contact time with the dirty surface. This allows the active components in the Intra Power Foam ample opportunity to properly act on the dirt. This enables dissolution and removal of even the most aggressive grease without any problems. Because of this, pathogenic microorganisms hiding in this dirt have no chance of developing further. Cleaning with Intra Power Foam is an excellent pre-treatment for later disinfection.

Use

Intra Power Foam can be used in a wide range of equipment to apply the foam. Use a concentration of 3 to 5%, depending on the amount of dirt that needs to be removed.

Intra Power Foam can safely be used on concrete, stone, stainless steel and plastic surfaces. With metals such as aluminium and untreated steel, we recommend testing Intra Power Foam on a small surface area.

A 3-5% solution of Intra Power Foam gives a good, compact foam that will completely cover the surface. The foam applied will easily adhere to the surface for 5 to 10 minutes without problems and without running down.

During this period, the solution will not dry up. This allows it to be easily washed away afterwards.

Bacterium / Fungus Concentration and disinfecting power	
E. Coli	3% concentration gives a log 3 kill rate within 5 minutes
Aspergillus Niger	3% concentration gives a log 3 kill rate within 5 minutes
Staphylococcus Aurus	3% concentration gives a log 3 kill rate within 5 minutes

Instructions:

1. Sweep the area clean
2. Prepare a 3 – 5% Intra Power Foam concentration (with cold water)
3. Apply the foam at a minimum pressure of 3 bar. The amount of foam formed depends on the pressure and spraying distance used
4. Apply a thin layer of foam
5. Contact time: 10 to 20 minutes
6. Wash away the foam, working from top to bottom. Preferably do this with low pressure and copious (warm) water
7. When the barn is free from droplets and puddles, disinfect the building with Intra Multi-Des.

Intra Power Foam is supplied in:

- 11 kg can – 22 kg can, 220 kg barrels, 1100 kg container.

Intra Power Foam is produced under GMP+ guidelines
