

OVO Vision is available in two versions:

- Manual data input
- Totally automated data input

The totally automated system gathers its information 100% error free, which guarantees a substantial labour decrement.

Tracking and tracing can be made visible for the individual object (egg-grading machine, tank, pasteurizer etc.) or for the complete production plant, starting at the purchasing side, through the processing ending at the sales side after the various production steps and stock locations.

Based on Microsoft® Navision®, an already very sophisticated trading and production application, which has been thoroughly adapted and fine-tuned to meet with the specific needs of the Egg Business.

The result is the perfect efficiency tool for the whole trade:

- Freight / DSD
- (Weekly) price agreements
- Sales of ungraded / graded products
- Interface to weighing bridge (sales per kg)
- Customer selections
- Route administration / advanced logistics

Market prices

- Unlimited number of market prices possible
- Net revenue calculation
- Price calculation based on market prices / agreements
- Historic market prices

OVO Vision features especially for Egg processing companies

OVO Vision features especially for Egg packing stations

Purchase - receipt

- Reception of graded and ungraded eggs
- Interface to weighing bridges
- Poultry farm and hen house administration
- Lot registration
- Price agreement administration
- Purchase of miscellaneous items, including packaging material
- Forecasting

Stock

- Ungraded / graded
- Interface to MOBA, Omnia family
- Interface to scanners
- Egg class
- Processing costs
- Downgrading
- Freight costs
- DSD (specific per customer order)

Sales

- Multiple customer delivery addresses
- Agents / discounts
- Contracts
- Sales orders
- Order lines / call lists
- Ordering unit and units of measurement may be different

Sales

- Technical specifications per customer per product
- Pre-ordering
- Product availability
- Container administration and status information
- Shipping depending on sampling
- Various documents based on Microsoft® Word documents
- Partial or total report of samples depending on customer technical specifications

Production

- Production orders
- Make to order, make to stock
- Production planning / pasteurizer planning
- Breaking per container
- Mixing
- Additional mixing
- Production shifts and lots
- Sampling
- Filling

Sampling

- Variable sampling frequency
- Variable researches
- Variable results
- Variable reports

OVO Vision

the total solution for the Egg Business

Developed and serviced by committed professionals who have a deep insight in, and knowledge of your business.

Even more possibilities...

Besides the specific adjustments, the standard functionality of financial / accounting software are also available, including general ledger, customer and supplier administration, stock control and fixed assets administration.

Any functionality not provided by the system can be realised quickly and for attractive prices.
For organisations that also deploy other activities than those of an egg packing station it is possible to create an integrated and comprehensive solution for those other components based on the same technology and user interface.

OVO Vision, the integrated software solution that gives you the complete overview.

OVO Vision:
**Insight and overview
for the Egg Business**

O V O V I S I O N

The complete overview of your business
with one comprehensive software program

OVO VISION

*Easy to use
high quality integrated
software for
egg packing stations
and egg processing
companies*

Transferring data from one program to another usually means a lot of extra handling, redundant data feeding and a considerable chance of errors, with all costly consequences... Chances are you work with separate programs for weighing, quality control, labelling, logistics, stock control, administration and general ledger.

Although this causes a lot of unnecessary work and errors, the real problem is much bigger. These 'software islands' lack the one thing really needed to maximize efficiency and profits: overview.

The integrated solution that OVO Vision supplies covers all aspects of the Egg Business.

This includes:

- complete data intake from suppliers (product's history, medication / food etc.)
- logistics
- general ledger and administration
- tracking & tracing
- quality control
- administration and finance
- management information
- weighing
- labelling
- stock control

All of this is accessed using one easy to use interface and one efficient uniform working method.

OVO Vision

The integrated software solution: total

Track & trace all aspects of each individual egg

The ability to track and trace a product throughout the entire chain from producer to consumer is becoming increasingly important for any business. Being in the food sector, it is even more important for the Egg Business. To keep track (and data) of every individual bought and sold egg or batch is essential. With OVO Vision you can!

This provides enormous advantages:

- Exact knowledge of the cost structure of each individual egg, batch, flock and farmer.
- Minimize damage in case of a recall operation.

A recall of say 10.000 eggs that can be traced exactly is less expensive than having to recall 10 million because they cannot be located.

control from hen house to customer

Why specifically developed software for the Egg Business?

The Egg Business has some very specific characteristics which cannot be covered by standard software. Therefore until now the only software solutions consisted of a patchwork quilt of separate software islands, with all its ineffectiveness, redundant data input operations and vulnerability for errors.

These specific characteristics include:

- Purchase prices are not known until after the sale.
- Invoicing with all sorts of trimmings (market prices, B-quoting, agreements, contracts, free range).
- Sale and purchase of several components in a product.
- Purchase and sale in several units of measurement.
- The weight of the product to be sold being variable (a pallet weighs 600 tot 750 kg).
- The revenue of the product (carton of eggs) is not interesting: the revenue of A SPECIFIC EGG is.

OVO Vision - the truly specialized Egg Business software - has implemented all these aspects in its functionality.

A comprehensive efficiency tool
