Big Dutchman®

MalePan M

The new male pan with metal dish

Big Dutchman has developed a new feed pan for males, the **MalePan M** with a dish made of galvanized sheet metal. Separate male feeding is an important prerequisite for high fertility rates and good chick quality in broiler breeder

management. Males must be fed separately so the correct quantity of a specially-mixed feed can be provided. The new MalePan M is a very stable feed pan with a very simple but effective design. The radial knurling at the inside of

the dish gently wears down the beak: an advantage especially when managing untrimmed males! The open design (no grille) makes feed intake easy for the males.

The coarse surface gently wears down the beak

Openings (at the top and the bottom) facilitate a thorough cleaning

The advantages at a glance

- ✓ the galvanized sheet metal dish has a coarse surface that wears down the beak in a natural manner;
- ✓ simple, robust and stable feed pan;
- ✓ height can be adjusted in a way that
- the females cannot reach the feed;
- ✓ no tube adapter required so cleaning is simple and thorough;
- ✓ well-suited for any house length because the hopper can be installed
- at the end of the feed line (up to a house length of 75 m) or in the middle (up to a house length of 150 m);
- ✓ pan diameter: 330 mm
